SUMMARY

Software engineer building LLM products in Python and TypeScript: **LangGraph agents**, **RAG pipelines**, **FastAPI** services and **React/Next.js** interfaces. Built a multi-step research agent with tool calling and memory across **5+ tools**, and a full-stack RAG platform on pgvector answering questions over **500+ documents** in **under 2 seconds**. Production experience shipping **12+ REST APIs** and UIs for **10,000+ monthly users**. Open to AI engineer, GenAI and backend roles. Based in Mumbai, available immediately.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL

Agentic AI: LangGraph, LangChain, Tool Calling, Multi-step Agents, Stateful Workflows, Conversational Memory, Prompt Engineering

Generative AI: RAG, Embeddings, pgvector, Semantic Search, Hosted LLM APIs (OpenAI, Anthropic, Gemini), Streaming Responses

Backend & Frontend: FastAPI, Flask, Node.js, Express.js, REST APIs, JWT Authentication, React.js, Next.js, Vite, Tailwind CSS, Recharts

Databases & Tools: PostgreSQL, MongoDB, Git, GitHub, Linux/Bash, Postman, AWS (basic)

EDUCATION

Buddha Institute of Technology

Gorakhpur, India

Computer Science & Engineering

WORKING EXPERIENCE

Software Developer (Contract) at Gharpayy

Bangalore, India

May 2026 - Aug 2026

- Developed and maintained CRM modules for lead tracking and customer data, supporting a **sales team of 15** in a production system.
- Built backend workflows that improved lead management and data consistency across **5,000+ customer records**, **cutting manual entry by 35%**.
- Debugged existing functionality and collaborated with cross-functional teams, **resolving 30+ production issues**.

Full-Stack Developer Intern at RD Group of Industries

Remote, India

Feb 2026 - Apr 2026

- Built and deployed full-stack applications across **5+ client projects** using React.js, TypeScript, Node.js and Python backend services.
- Developed reusable React and TypeScript components, forms and dashboards, **increasing user engagement by 24%**.
- Integrated REST APIs with authentication middleware and optimized frontend data flows, **reducing runtime issues by 40%**.

Full Stack Engineer at Parashift Technologies

Mumbai, India

Apr 2025 - Oct 2025

- Owned **3+ production MERN features** end to end: React.js frontends, Node.js/Express APIs and MongoDB data layers.
- Developed **12+ REST APIs** in Node.js and Express, implemented JWT authentication and fixed API security vulnerabilities.
- Optimized database queries, **cutting backend response time by 30%**, behind UIs serving **10,000+ monthly users**.

ENGINEERING PROFILE

DSA: **100+ LeetCode problems** covering Arrays, Trees, Graphs, Dynamic Programming, Backtracking, BFS/DFS, Binary Search and Sliding Window.

Certification & Courses: The Complete Full-Stack Web Development Bootcamp; Claude Skilljar course on Generative AI; Python Complete Web Development; LangChain.

KEY PROJECTS

Agentic Research Assistant

Python, LangGraph, LangChain, OpenAI, RAG, FastAPI

- Built an agentic research assistant that breaks open-ended research questions into steps, selects the right tool, retrieves information and returns structured answers.
- Implemented tool-calling and retrieval workflows in LangGraph and LangChain with stateful execution and conversational memory across **5+ tools**.
- Exposed the agent through FastAPI endpoints so external applications can trigger and run multi-step research workflows.

AI Document Intelligence Platform (Aivana)

[GitHub](#)

Python, FastAPI, LangChain, pgvector, Hugging Face, React

- Built a full-stack document intelligence platform that extracts PDF text, splits it into overlapping chunks and stores Hugging Face embeddings in PostgreSQL + pgvector, enabling natural-language Q&A over **500+ documents**.
- Implemented Retrieval-Augmented Generation with vector search behind a model-agnostic LLM layer (OpenAI, Anthropic, Gemini via LangChain), returning grounded answers in **under 2 seconds** on average.
- Developed FastAPI routes for document ingestion, chats, streaming responses and settings, secured with JWT authentication, behind a React + Vite frontend.

NutriTrack

[GitHub](#)

React, Recharts, Node.js, Express, PostgreSQL, JWT, Gemini API

- Developed a full-stack nutrition platform with meal tracking, macro analytics, onboarding and personalized food insights for **100+ users**.
- Integrated AI-powered meal analysis with the Gemini API and built secure, user-specific workflows with JWT authentication, bcrypt and PostgreSQL on a Node.js/Express backend.
- Designed interactive Recharts dashboards in React for tracking nutrition goals and daily progress.
